Saumya Soni

Data Visualization & Analytics · AI Systems Engineering

contact.saumya01@gmail.com | github.com/Algoastronaut | Portfolio

Data-driven CS student specializing in building robust data visualization dashboards (Tableau, Excel) and engineering generative AI applications (RAG, Agentic Workflows). Proven ability to transform raw, high-volume datasets into structured, actionable insights and deployment-ready systems.

SELECTED PROJECTS

Estate Agent AI — Autonomous Advisory System 2026

LangGraph, XGBoost, ChromaDB, Streamlit

- Engineered a 7-node LangGraph agent combining XGBoost regression with RAG-based intelligence (Knight Frank, JLL) to generate investor-grade property reports.
- Implemented rigorous guardrails, confidence scoring, and automated retry loops to ensure 100% data-backed, accurate LLM outputs.

GitHub Live App

Airline Ticket Prices vs Fuel Costs Analysis 2026

Tableau, Python, ARIMA, Statistical Modeling

- Built an automated ETL pipeline integrating 6 complex aviation datasets, performing advanced statistical modeling including OLS regression and t-tests.
- Designed a dynamic Tableau dashboard revealing that fuel-to-fare pass-through is driven heavily by geopolitical shifts rather than strict 1:1 cost translation.

GitHub Tableau Dashboard

Indian Crime Trends Analytics Dashboard 2026

Google Sheets, Python, Pivot Tables

- Analyzed 40,000+ criminal records across 29 cities to uncover spatial vulnerability, gender disparity (55.6% female victims), and investigation bottlenecks.
- Developed an interactive KPI dashboard using complex pivot tables and calculated fields to drive data-informed, strategic policing insights.

GitHub

Property Price Prediction Pipeline 2026

scikit-learn, Random Forest, Pandas, Streamlit

- Developed an end-to-end regression pipeline for housing prices, aggressively optimizing hyperparameters via RandomizedSearchCV for maximum accuracy.
- Deployed model on Streamlit with interactive feature-importance visualizations and error residual analysis charts to ensure complete interpretability.

EDUCATION

Newton School of Tech

B.Tech CS & Data Science

2024 — 2028

Focus on Machine Learning, Analytics, Algorithms, and Databases. Consistently delivering high-impact capstone projects.

TECHNICAL SKILLS

Visualization & BI

Tableau, Excel, Google Sheets, Power BI

Programming Languages

Python, SQL, NoSQL

AI & Machine Learning

scikit-learn, XGBoost, LangGraph, RAG

Data Libraries

Pandas, NumPy, Matplotlib, Seaborn

Tools & Frameworks

Git, GitHub, Streamlit, Jupyter

ACHIEVEMENTS

UDAI Hackathon Participant

Competed in a rigorous data & AI hackathon, rapidly prototyping analytics-driven solutions under strict time limitations.
